### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The claimed invention is drawn to methods of screening for antimicrobial agents using proliferation genes identified by introducing an exogenous nucleic acid into a microorganism, where the exogenous nucleic acid is a random fragment or sequence and has substantial sequence identity to an endogenous microbial gene, and identifying the endogenous gene as a microbial proliferation gene by comparing the proliferation or viability of the microorganism with and without the gene. The declarations filed by Dr. Simons, who is not an inventor and who is a professor at UCLA, and by Dr. Foulkes, who is not an inventor but is associated with the Assignee, were persuasive in demonstrating secondary consideration which are not rebutted by evidence of record. In particular, Dr. Simons notes in paragraph 9 that he was severely skeptical that it was possible to perform the invention at the time of invention. Given this evidence of secondary considerations, in accordance with MPEP 716.05, the claims are found unobvious over the cited prior art.

2. With regard to the nonelected species, since the generic claim is allowed, these species are rejoined. Consequently, any further applications claiming these species in the same generic claim will be subject to a double patenting rejection.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
